

Granite Parapet / Slab Guardrail System

The Dual Guard Rail System is a portable perimeter barrier that mounts easily on parapets and/or concrete slabs. The first component is the clamp, the second component is the guardrail post. The guardrail post sets on the insert, secured by a snap pin. Wood or cable is then used to provide the passive perimeter protection. (Granite does not provide the wood or cable).

Parapet / Slab Clamp Features

- Meets and exceeds OSHA/ANSI Standards
- Dual application - can be used on a parapet wall or slab application
- Easily Adjustable - via a hand nut, similar to a scaffolding jack. Set the clamp and post in place and tighten the hand nut for a secure fit.
- Varying Widths - The clamps expand from 4.5" to 25" providing a full range of compatible widths.
- Heavy Duty - constructed from steel
- Protective Finish - The center screw is galvanized, while the clamp and post are powder coated.

Guardrail Post Features (20202)

- Meets and exceeds OSHA/ANSI Standards
- Simple Install - Place guardrail post on insert and secure with snap pin
- Heavy duty - Constructed from steel
- Versatile - Easily attach 2x4's using the drilled out nail holes or string cable for perimeter barrier.
- Powder Coated - Provides an excellent finish and protection.

Full System Features

- This parapet / slab clamp and post, with your choice of wood or cable, provides a secure perimeter barrier for parapets and slab applications.
- Install 6 feet apart
- 3 year warranty against manufacturers defects.
