

Snappy Platform Modification

The Granite Snappy Platform will work with the multi-purpose and all purpose units.

To use competitive platforms on the Snappy unit, drill four 5/8" holes in the competitive platform. This can be done on the job by either using a Snappy platform as a pattern, or by laying the competitive platform on the arm pins and marking accordingly. Take care to center the platform and the pattern / arm pins when marking or drilling the holes.
