

12" Leg Shown (6" Leg Available)

Steel leg extenders are a practical addition for any table rental company. Simply slip the units over the legs of any table with a 1" diameter leg and extend the height by 6 or 12 inches.

Constructed from steel

Unlike PVC or plastic, these extenders are built to last. Constructed from high quality steel these extenders have class leading durability. They are able to stand up to wear and tear that lead most extenders to crack or break. The steel is powder coated for classy and professional look. The powder coating also protects the steel.

Protective Collar

An inner collar protects the table legs from scratches. The collar also provides a snug fit for the leg. This minimizes table wobbling.

Protective Foot

The bottom of the extender has a non-skidding, protective plastic cover. This foot protects the floor from the steel extender and provides a more stable base.

TABLE LEG STEEL HEIGHT EXTENDERS

Simple Operation

The table legs sit on a bolt. Slide the legs over the extender and experience a table that is stable at a new height.

Save Money and Inventory Costs

The table leg extender doubles your inventory at a fraction of the cost and hassle. Any table with 1" legs can instantly become 12" taller, taking a standard 30" tall table to a bar height of 42". This provides additional table options without investing in a large amount of 42" tables. This keeps inventory costs down and also helps to maximize the current inventory already available.

12" Leg Package (75118)
